

Calculator

Difficulty:	Medium
Requirements:	Variables, input/output, conditions
Aims:	make decisions during run time

- Write a Program, that takes two numbers and an operator (+, -, /, *, %) as input and prints the result.
- **Experts:** The program should also accept the words *add*, *subtract*, *multiply*, *divide* and *remainder* as operators.

Hints

- **Experts:** Look at the difference between the words.
- **Experts:** How many letters do you have to check?
