

# Hangman

<b>Difficulty:</b>	Very Hard
<b>Requirements:</b>	All you learned in C-Introduction
<b>Aims:</b>	Apply your knowledge

Write a simple hangman game! Everytime the player is wrong, add a new part to the gallows / the hanging man and print it to the terminal:

```

      -----
      |/  o
      |  ^W^
      |  /\
      |
      -----
     /\
    /\
   /\
  /\
=====

```

word: game o\_e\_  
wrong: hfnwitic

**Experts:** Have a list of possible words in the source code and let the program randomly choose one at the start.

## Hints

- `strcmp()` compares two strings.
